

ODP-83-221  
7 February 1983

MEMORANDUM FOR: Chief, Domestic Communications Division/OC

STAT FROM: [redacted]  
Chief, Teleprocessing Branch/ED/ODP

SUBJECT: SAFE Development Communications Support

1. Access to the SAFE Unclassified Development processor in the Northside Computer Center (NCC) is required by the Consolidated SAFE Project Office (CSPD) and its contractors for the purpose of software development. Communications support for this requirement includes a dedicated and dial-up data access arrangement. Access for terminals located in the Headquarters Building is also needed. The number of terminals and their locations are identified in Attachment 1. The target installation date is June 1983 (March 1983 for terminals in Headquarters).

STAT 2. CSPD plans to move to a contractor leased facility [redacted]  
STAT [redacted] The largest concentration of users is at this site and will require a dedicated service initially capable of handling 33 terminals. Dual data grade lines or a single wide band service is anticipated. Request C&P be contacted promptly to determine the types of service available in this area.

3. The number of users and locations of other contractor facilities suggests a dial-up arrangement. C&P's assistance is needed in determining lines and hardware requirements. The network will consist of sixteen 2400bps asynchronous terminals. Limited space in the NCC is available for the installation of hardware.

STAT 4. Please contact [redacted] for details and coordination.  
We would like some clarification from you on the role OC would be willing to play in the installation of such a system.
